

MEDIA RELEASE

Wastewater Collection System's Large Diameter Pipe Cleaning

SANTA BARBARA, CA – July 8, 2012

The Public Works Department's Water Resources Division has begun cleaning portions of the City's Wastewater Collection System's large diameter pipes. Work will be conducted Sunday night through Friday morning from 10:00 p.m. to 6:00 a.m. The work is scheduled during the nighttime hours to avoid high daytime sewage flow levels and to avoid daytime traffic and business operations. The primary neighborhoods that will be affected are the Westside, Eastside, and Waterfront areas of Santa Barbara.

The purpose of the night time maintenance project is to clean and inspect the condition of the City's larger diameter sewers. During the cleaning and inspection processes, the City's hydro-vacuum cleaning truck and equipment may be working in your neighborhood.

This cleaning work is scheduled to last a maximum of four weeks
